## Salming Floorball 14/15

*Salming is the athlete's brand, we are constantly looking for new ways to play, new demands, and new needs. In the world of Floorball old truths often need to be reconsidered, good can always be a little bit better, you can always work a little bit harder. But sometimes, it really is up to the equipment, and that is the occasions we target when we develop our Floorball gear.*

*The past season 13/14 we launched several new exciting products that really make a difference for the player, among those - The Xshaft™ and The Q1 blade, the latter is the successor to the original Quest blade. The new slimmer shaft geometry of Xshaft™, powered with KickZone™ and TipCurve™, has been received very well by the players and the new Q1 has turned out to be nothing short of a success. Players all over the world has praised it for it's versatility in terms of playability and shooting characteristics. Mattias Samuelsson of Storvreta, World Champion and Swedish Champion, being one of the them.*

The Salming Power blade – the Quest2 – made famous by Rasmus Sundstedt and his famous bow run sweeper shot, continues to attract hard shooting players all over the world. Sundstedt has combined it with a special version of the Xshaft™ powered with KickZone™, and on his fast and agile feet – the Salming Race R1 shoe, the combination has turned out to be winning.

Speaking of shoes, season 14/15 we step up the shoe race a notch by launching a new updated and improved Race range, but also two hot new shoe models – The Salming Viper indoor shoe & The NinetyOne sneaker shoe.

The Salming Viper is a fast paced agile shoe with a low profile and excellent stability characteristics. It incorporates the very best of Salming Indoor shoe technologies and then some. If you're a fan of the Salming Race model you will find the Viper lower and less cushioning in the fore foot area enabling a more close-to-the-court stabile construction plus a lighter and more breathable shoe upper. The construction of the latter has it's origin in the Salming Running shoes, where it has been very well received with its three layer system where the unique Salming ExoSkeleton™ keep the foot in place. Agile, fast paced with a low profile – The Viper.

Season 14/15 Salming steps up the shaft technology race even further by launching the FatKick™, a new geometry mixed with the unique Salming Technologies KickZone™ and TipCurve™. The FatKick™ with it's fat upper shaft geometry provides a powerful shooting effect enabled by pushing the KickZone™ and TipCurve™ areas to perform on top of their physical abilities. The FatKick™ comes in both the Q1 and Q2 series, depending on what your preferences are.

Salming Goalie equipment has always been a hallmark of the brand, a strong and expressive design in combination with great protective and agile properties has established Salming as one the world's best Floorball goalie equipment manufacturers. The collection of 14/15 will make sure we continue on that path, across the entire range, starting with Layer 1 - the ProTech™ series, that provides agile protection equipment – to Layer 2 with some of the most expressive Salming Goalie designs to this date. To top that of, the 4th generation of the world's first Floorball Goalie shoe – The Slide, has been updated...

Welcome to Salming Floorball season 14/15!

VIPER

VIPER - MEN // ART. NO. 1234071

The Salming Viper is a fast paced agile shoe with a low profile and excellent stability characteristics. It incorporates the very best of Salming Indoor shoe technologies and then some. If you're a fan of the Salming Race model you will find the Viper lower and with less cushioning in the fore-foot area, enabling a more close-to-the-court feel plus a lighter and more breathable upper. The construction has its origin in the Salming Running shoe product range, where it has been very well received with its three layer system where the unique Salming ExoSkeleton™ keeps the foot in the right position during lateral movements and high performance activities. Agile, fast paced with a low profile – The Viper.

At the core of the shoe's design, you will find Salming's unique T.G.S. 62/75° system which specifically designates the distance from heel to the ball of the foot (62% of the shoe) in order to optimize stability, comfort, and performance. Key to this design is the firmer, stabilizing section which ends at the ball of the foot at the so-called "ballet" line, a 75° angle. In front of the 75° line, we have equipped Salming Viper with a specially composed section which gives greater flexibility in order to further stimulate the foot's natural movements.

The midsole features a special High Abrasion Injection EVA - RunLite™ - designed to create a nice feel for the court. It is light and responds to the surface from the very first step.

In addition, the Viper features both the 11°™ angle concept on the outer edge of the shoe which helps avoid the risk of ankle injury, and our innovative RollBar™-technology on the inner edge, for quicker and better lateral push-off.

In order to help you control all of this cornering performance, our XR110 outer sole has an extra sticky developed compound!

# Salming Viper innovative technologies...

## UPPER

### 3 layer construction

A first layer of mesh material adds comfort, while the middle stabilizes lateral movements and reduces pressure on the foot. The exterior thin net mesh encapsulates and wraps up the front in a neat fashion, adding durability to the shoe.

### ErgoHeelCup™

To stabilize and fixate the heel, which is key to providing a great fit and comfort, we have developed a new anatomical Ergo Heel Cup that is slightly longer than the average heel cup.

## MID SOLE

### T.G.S.62/75™

Torsion Guide System. The distance from heel to the ball of the foot (62% of the shoe) has been designed with extra stability, which ends in the so-called "ballet" line, a 75° angle. In front of the 75° line, we have equipped the shoe with greater flexibility to stimulate the foot's natural movements. TGS 62/75 takes all of the gait cycle criteria into consideration. At the same time, it softens the strains caused by friction during lateral movements. The shoe bends in exactly the right places, stimulating the foot's natural lateral and forward movements.

### LMS™

Lateral Movement Stabilizer - an especially designed light weight integrated dual torsion unit that supports the foot during fast and irregular lateral movements.

### RunLite™

The midsole features a special High Abrasion Injection EVA - RunLite™ - designed to create a nice feel for the court. It is light and responds to the surface from the very first step.

## OUTER SOLE

### RollBar™

An increased radius on the inner side of the outer sole, facilitates rolling the foot inwards and toe push off. Reaching for that stop ball in squash or covering a shot in floorball is made easier with the RollBar™ technology.

### LMS+™

Fast lateral stops expose the foot to the risk to roll over outwards, causing injuries. LMS+ (Lateral Movement Stabilizer Plus) is a unique design with a positive angle of 11° that prevents the foot from rolling over outwards.

### Drop 7°

The heel to toe drop of 7° sets up a natural posture, allowing a correct lean throughout the stride.

### XR110™

In order to help you control all of this cornering performance, our XR110 outer sole has an extra sticky developed compound!

## RACE

RACE R1.2.0 // ART. NO. 1234091

The shoe's upper is made from a durable lightweight polyester fabric, which is then covered in a special black exo skeleton that effectively helps keep the foot in the right position during lateral movements and high performance activities. This uniquely comfortable upper construction helps the shoe to feel perfect on your foot from the first instant with virtually zero "break-in" time.

Compared to many of the competitors, Race is designed with less heel to toe drop, and a thicker forefoot with greater rebound characteristics, making it extremely comfortable and fun to run in.

At the core of the shoe's design, you will find our unique T.G.S. 62/75° system which specifically designates the distance from heel to the ball of the foot (62% of the shoe) in order to optimize stability, comfort, and performance. Key to this design is the firmer, stabilizing section which ends at the ball of the foot at the so-called "ballet" line, a 75° angle. In front of the 75° line, we have equipped Salming Race with a specially composed section which gives greater flexibility in order to further stimulate the foot's natural movements.

In addition, this great shoe features both our 5°™ angle concept on the outer edge of the shoe which helps avoid the risk of ankle injury, and our innovative RollBar™ technology on the inner edge, for quicker and better lateral push-off.

In order to help you control all of this cornering performance, our XR110 outer sole has a sticky compound that provides excellent traction properties!

# Salming Race series innovative technologies...

## UPPER

**ErgoHeelCup™**  
To stabilize and fixate the heel, which is key to providing a great fit and comfort, we have developed a new anatomical Ergo Heel Cup that is slightly longer than the average heel cup

**Exo Skeleton™**  
The exo skeleton design stabilizes the foot for lateral movements and reduces pressure at the MTP joints (Metatarsophalangeal joints). It is important to keep the foot stable medio-lateral, avoiding friction and side forces in the soft parts of the foot sole, especially underneath the forefoot.

## MID SOLE

**T.G.S.62/75™**  
Torsion Guide System. The distance from heel to the ball of the foot (62% of the shoe) has been designed with extra stability, which ends in the so-called "ballet" line, a 75° angle. In front of the 75° line, we have equipped the shoe with greater flexibility to stimulate the foot's natural movements. TGS 62/75 takes all of the gait cycle criteria into consideration. At the same time, it softens the strains caused by friction during lateral movements. The shoe bends in exactly the right places, stimulating the foot's natural lateral and forward movements.

**LMS™**  
Lateral Movement Stabilizer - an especially designed light weight integrated dual torsion unit that supports the foot during fast and irregular lateral movements.

**Rebound Foam**  
Forefoot rebound energy foam - RE35. 80% better rebound energy than a regular EVA midsole compound.

**Cushioning Foam**  
Heel cushioning foam - C35, positioned at the heel centre, gives you 70% better shock absorption than a regular EVA midsole compound.

## OUTER SOLE

**RollBar™**  
An increased radius on the inner side of the outer sole, facilitates rolling the foot inwards and toe push off. Reaching for that stop ball in squash or covering a shot in floorball is made easier with the RollBar™ technology.

**LMS+**  
Fast lateral stops expose the foot to the risk to roll over outwards, causing injuries. LMS+ (Lateral Movement Stabilizer Plus) is a unique design with a positive angle of 5° that prevents the foot from rolling over outwards.

**XR110**  
A newly developed durable rubber compound with excellent 25% traction improvement!

**SpeedLite™**  
The SpeedLite™ midsole is a lightweight performance EVA compound with long lasting cushioning qualities.

SLIDE >> SLIDE GOALIE SHOE // ART. NO. 1234084

THE FOURTH GENERATION of the world's first floorball goalie shoe. A light weight shoe with excellent sliding characteristics and maximized flexibility. The sliding area is padded and powered with a very durable polyester nylon which provides excellent sliding properties no matter the quality of the floor surface. Divided outer sole for maximized flexibility. Asymmetrical lacing covered by an exo tongue construction that keeps the lacing in place and protected throughout the game.

NINETYONE

NINETYONE // ART. NO. 1234070

Salming NinetyOne indoor shoe has a super soft suede upper that provides great comfort and flexibility. The outer sole is made in raw rubber to provide maximum traction.

But there's more than meets the eye on this elite level floorball shoe, inside the raw rubber outer sole shell there's a hidden lightweight EVA performance midsole, making this shoe an excellent indoor performance shoe as well as a cool looking sneaker.

Suede is a natural material. If your shoes get dirty, dry brush the dirt away, then use a suede brush - you can't wash suede.

With every NinetyOne model comes an extra pair of laces so you can customize your own personal look.

**Size** EUR 40 2/3 - 48

**INFO** Our popular light weight carbon composite shaft in flex 27. Powered with the Q1 blade in Endurance™ material.

## Salmings shaft technologies

**FatKick™**-FatKick™ - a new geometry mixed with the unique Salmings Technologies KickZone™ and TipCurve™. The FatKick™ with it's fat upper shaft geometry provides a powerful shooting effect enabled by pushing the KickZone™ and TipCurve™ areas to perform on top of their physical abilities.

**TipCurve™** - is exactly what the name says - a curve at the tip end of the shaft creating an optimized angle towards the floor surface and the ball - resulting in harder shots without having to bend the blade heel part.

**Xshaft™**- The X-shaft is a totally new shaft construction from Salmings. It's design is slimmer than the regular curved shafts and it has an optimized KickZone™ area and a reduced TipCurve angle°.

**KickZone™** - is developed to provide an increased whip-effect meaning that the shaft when bent is kicking back faster and thereby hitting the ball with greater power - creating an increased ball speed.

**TourLite™** - we use only the very best light weight carbon fiber material with a unique layup construction to create TourLite™ shafts. A favourite shaft among many of our Pro players around the world.

M. Lawton  
13

SAL

NO NONSENSE

**BASE FRAME STABILIZER BFST™**

BY OPTIMIZING THE heel and base frame area we achieve a rock solid blade construction with great torsional stiffness - enabling harder shots.

**SINGLE CAVITY PLUS™**

ONE SINGLE HORIZONTAL cavity along the entire blade area.

**INCREASED BALL CONTROL**

DEEPER VERTICAL cavity creating an enhanced ball control and thereby - more power.

**TOE DRAG DESIGN TDD™**

MAKING IT EASIER for you to pull the ball towards you and thereby increasing ball control.

# Salming Quest 2

Harder wrist shots  
Harder sweep shots  
Harder slap shots  
no nonsense.

Colour: Black / Safety Yellow  
Material: Polyester

**YOUTH** AERO MULTICOLOUR // ART. NO. 1132888

INFO Officially approved match ball by the IFF.

Colours: Magenta, Lime

INFO Salming developed protection eyewear with a unique wrap around design for exceptional fit and vision. Features a new type of curved lens construction shape for maximized vision, enhanced fit and safety called 8 base. 2K rubberized inserts on template sides for enhanced comfort and abrasion. Comes with an exclusive transparent bullet case that protects the glasses.

Size: Kid  
Lens:  
- Anti reflective coating  
- Scratch resistant coating  
- Ventilation holes decreases risk for inside lens fog  
- Hydrophobic treatment  
Construction: Wrap-around-design 8 base  
Material: Templates - soft and flexible TR90. Frame - Nylon 66  
Colour: Orange  
Neck strap: Adjustable woven quality

**YOUTH** RACE R3 2.0 - JUNIOR // ART. NO. 1234093

The shoe's upper is made from a durable lightweight polyester fabric, which is then covered in a special black exo skeleton that effectively helps keep the foot in the right position during lateral movements and high performance activities. This uniquely comfortable upper construction helps the shoe to feel perfect on your foot from the first instant with virtually zero "break-in" time.

# Salming V1 protective eyewear

**SALMING.**  
no nonsense.

## VI Technologies

**TEMPLATE SAFETY CONSTRUCTION.** We use the softer and more flexible TR90 material on the templates to decrease risk for injuries. In addition the templates also have a 2K rubberized area at the ear section for enhanced fit and comfort.

**ANTI REFLECTIVE COATING.** A polished lens surface produces reflections when light is incident on the surface, e.g. in the form of artificial lights in a sport arena. Reflections are troublesome to the athlete causing fatigue as well as being irritating to the eye. In order to eliminate these reflections we have added an Anti-Reflective coating to our lens.

**HYDROPHOBIC TREATMENT.** Hydrophobic layer repels water, sweat and grease, making the glasses easier to keep clean. Hydrophobic technology allows water to run off your lenses without unwanted water spots. Hydrophobic coating properties also dramatically increase scratch resistance.

**SCRATCH RESISTANT COATING.** Unfortunately no polycarbonate lenses are scratch proof. However our Scratch resistant coating extends the life of the lens preventing the small scratches that occur through day to day handling and cleaning. A scratch free lens of course means clearer vision.

**VI WRAP-AROUND-DESIGN** - offers exceptional fit causing less distraction during the game. Our V1 glasses are available in three sizes 115 mm, 125 mm and 135 mm - it is very important that the player has the right size in order to achieve proper protection and fit.

**FRAME PADDING AREA.** Frame inside is covered with neoprene padding for enhanced comfort and safety reason. Nose bridge is made in rubber material.

**MAXIMIZED VISION.** Our wrap-around design uses a 10-base lens for maximized vision, which is of utmost importance for playing performance.

**LENS FEATURES.** Our advanced Polycarbonate lens has many important features. Each lens is equipped with two air ventilation holes to reduce inside lens fog.

# Protection eyewear – recommended by IFF

## V1 PROTECTIVE EYEWEAR senior // ART. NO 1182851-9191

**INFO** Salmings developed protection eyewear with a unique wrap around design for exceptional fit and vision. Features a new type of curved lens construction shape for maximized vision, enhanced fit and safety called 10 base. 2K rubberized inserts on template sides for enhanced comfort and abrasion. Comes with an exclusive transparent bullet case that protects the glasses.

**Size** Senior  
**Lens** - Anti reflective coating  
 - Scratch resistant coating  
 - Ventilation holes decreases risk for inside lens fog  
 - Hydrophobic treatment

# AERO+ ball technology - Aero ballistic perfection, Fusion polymer, Duo x-bar, roundness...

## Aero+ Technology

### Aero ballistic perfection

- App. 1800 optimized dimples on the surface texture for superior air flight.
- Stable and predictable ball flight through a reduction of aerodynamic drag, which preserves the ball speed for a longer time.

### Fusion polymer

A highly advanced polymer that maximizes velocity and control. Our R&D team has created a unique fusion of polymer materials, which results in a soft superior feel and a predictable ball flight.

### Duo X-bar™

The inside of the ball is balanced and stabilized through a duo cross bar and stabilizer construction around the two center holes. The result is a more stable ballistic ball flight as well as a more even hardness and bounce.

### Surface texture

A smooth silk surface on the area that get in contact with the blade creates great ball handling.

### Roundness

Through a unique tooling design and manufacturing process - Aero plus has a superior roundness which provides greater accuracy and ball flight.

### Unique manufacturing process

The Aero floorball is injection moulded and mirror welded through a 100% automated process, utilising the most advanced production technique available.

### Quality certified

The quality control and testing are probably the toughest there is on the market. The result is a durable and perfected Aero floorball.

## Aero Technology

### Aero ballistic perfection

A unique dimple design surface - Design Patent: 001709940-0001 - covering twice as much surface of the ball as competitive balls on the market. Stable and predictable ball flight through a reduction of aerodynamic drag, which preserves the ball speed for a longer time.

### Fusion polymer

A highly advanced polymer that maximizes velocity and control. Our R&D team has created a unique fusion of polymer materials, which results in a soft superior feel and a predictable ball flight.

### X-bar™

The inside of the ball is balanced and stabilized through a cross bar and stabilizer ring around the two center holes. The result is a more stable ballistic ball flight.

### Surface texture

A mix between silk smooth surface on the area that get in contact with the blade and a glossy finish inside the dimples for a better feel and improved aerodynamic characteristics.

### Roundness

Through a unique tooling design and manufacturing process - Aero has a superior roundness which provides greater accuracy and a more predictable ball transportation and ball flight.

### Unique manufacturing process

The Aero floorball is injection moulded and mirror welded through a 100% automated process, utilising the most advanced production technique available.

### Quality certified

The quality control and testing are probably the toughest there is on the market. The result is a durable and perfected Aero floorball.
